SPECIAL TACTICS: HIGH INTENSITY URBAN COMBAT

This book is an open-source, abridged version of the longer Squad-Level Military Urban Combat manual published by Special Tactics in 2017. This version focuses on urban warfare and Close Quarters Battle (CQB) tactics designed for high-intensity, conventional warfare. Almost all of current U.S. military and special operations doctrine focuses on precision CQB tactics that trace their origins to special operations hostage rescue units. There is a notable gap in tactics focused on how to fight a near-peer adversary on a conventional battlefield. Such tactics and knowledge could prove particularly useful for promoting peace and security around the world giving the rising trend in urban conflicts.

Topics Include:

- Basic urban combat and Close Quarters Battle (CQB)
- Immediate entry and delayed entry tactics
- Tactics for crossing streets, alleys and windows
- Fragmentation grenade employment
- Urban machine gun employment
- Mouse-holing and conventional urban breaching
- Clearing damaged or compromised building structures
- Subterranean combat tactics and sewer/tunnel clearing
- Urban small-unit defense
- Urban casualty evacuation and counter-sniper tactics
